TRAN, TONGOC

ART UNIT	PAPER NUMBER
----------	--------------

2134

DATE MAILED: 02/10/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/613,983

Applicant(s)

LEAH ET AL.

Examiner

Tongoc Tran

Art Unit

2134

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 9/1/2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-36 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-36 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. This office action is in response to Applicant's Request for Continued Examination filed on 9/1/2004. Claims 1-5, 9-10, 12-13, 15-17, 21-22, 24-25, 27-29, 33-34 and 36 have been amended. Claims 1-36 are pending.

### ***Response to Arguments***

2. Applicant's arguments with respect to amended claims have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8, 10-20, 22-32 and 34-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blakley III et al. (U.S. Patent No. 5,862,323, hereinafter Blakley) in view of Barry et al. (U.S. Patent No. 6,615,258).

In respect to claim 1, Blakley discloses a computing environment having a connection to a network, a computer program product for securely propagating security

credentials using a trusted master registry, the computer program product embodied on one or more computer-readable media and comprising:

computer-readable program code means for establishing a secure connection between a client and a password synchronization agent (PSA) (see col. 3, lines 35-46);

computer-readable program code means for validating the user with the trusted master registry using the transmitted user identifier and identifying secret on the request of the PSA (see col. 2, line 26-57);

computer-readable program code means for receiving at the PSA from the client over the secure connection an identifier of a user and an identifying secret of the user (see Fig. 4, col. 8, lines 52-67) ;

computer-readable program code means for validating the user with the trusted master registry using received user identifier and identifying secret, on request of the PSA (see col. 2, lines 45-67);

computer-readable program code means for propagating the identifying secret of the user directly from the PSA to one or more target registries if the validation succeeds (see Fig. 3A col. 2, lines 24-col. 3, lines 20, col. 6, lines 40-60 and col. 7, lines 7-33, the limitation is met because the security server (PSA) encompasses DCE registry, see Fig. 3A, and col. 2; lines 55-57).

Blakley does not explicitly disclose but Barry discloses receiving at the PSA from the client over the secure connection during the propagation request processing and propagating the received identifying secret of the user directly from PSA to *one* or more target registries (see Barry col. 12, line 63-col. 13, line 13, "e.g. user changes

Art Unit: 2134

password, the new password is transmitted in real time to a server responsible for updating...). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Barry's real time propagating of user password with the teaching of Blakley for teaching of password synchronization between a main data store and plurality of secondary data stores for more secure protection of the user identifier and identifying secret.

In respect to claim 2, Blakley and Barry disclose the computer program product according to Claim 1, further comprising:

computer-readable program code means for establishing a second secure connection between the PSA and the trusted master registry (see col. 11, lines 27-31); and

computer-readable program code means for using the second secure connection for the validating of the user (see Blakley, col. 2, lines 34-44).

In respect to claim 3, Blakley and Barry disclose the computer program product according to Claim 1, further comprising:

computer-readable program code means for establishing additional secure connections between the PSA and each of the target registries; and computer-readable program code means for using the additional secure connections for the propagating of the received identifying secret (see Blakley col. 8, lines 34-44).

In respect to claim 4, Blakley and Barry disclose the computer program product according to Claim 1, wherein the master registry stores password synchronization policy information, and wherein the computer-readable program code means for

propagating the received identifying secret further comprises computer-readable program code means for identifying the target repositories using the stored password synchronization policy information for the user (see Blakley, col. 3, lines 54-60, col. 5, lines 49-62, col. 6, lines 40-60).

In respect to claim 5, Blakley and Barry disclose the computer program product according to Claim 1, wherein the master registry stores password synchronization policy information, and wherein the computer-readable program code means for propagating the received identifying secret further comprises computer-readable program code means for identifying the target repositories using the stored password synchronization policy information for a user group of which the user is a member (see Blakley, col. 5, lines 49-62, col. 6, lines 40-60).

In respect to claim 6, Blakley and Barry disclose the computer program product according to Claim 1, wherein the computer-readable program code means for establishing the secure connection further comprises computer-readable program code means for authenticating the PSA to the client (see Blakley, col. 5, lines 49-62, col. 6, lines 40-60).

In respect to claim 7, Blakley and Barry disclose the computer program product according to Claim 2, wherein the computer-readable program code means for establishing the second secure connection further comprises computer readable program code means for authenticating the master registry to the PSA (see Blakley, col. 2, lines 34-45).

In respect to claim 8, Blakley and Barry disclose the computer program product according to Claim 3, wherein the computer-readable program code means for establishing additional secure connections further comprises computer readable program code means for authenticating the one or more target registries to the PSA (see Blakley, col. 2, lines 34-45).

In respect to claim 10, Blakley and Barry disclose the computer program product according to Claim 1, wherein the computer-readable program code means for validating further comprises computer-readable program code means for invoking an authenticated LDAP bind or other native authentication mechanism of the master registry, wherein the received identifier of the user and the identifying secret of the user are passed to the master registry, thereby causing the master registry to validate the passed identifier and identifying secret and return a result which reports a success or failure of the validation (see Blakley, col. 7, line 52-col. 8, line 4) .

In respect to claim 11, Blakley and Barry disclose the computer program product according to Claim 1, wherein the PSA has administrative authority for performing operations at the one or more target registries (see Blakley, col. 11, lines 27-31).

In respect to claim 12, Blakley and Barry disclose the computer program product according to Claim 1, further comprising:

computer-readable program code means for obtaining a new value from the user to be used as the propagated identifying secret if the validation succeeds (see col. 2, lines 15-54 and col. 7, lines 5-34); and computer-readable program code means for substituting this new value for the received identifying secret prior to operation of the

computer readable program code means for propagating (see Blakley, col. 7, line 52-col. 8, line 4).

In respect to claims 13-20 and 22-24, the claim limitations are system claims that are substantially similar to computer readable medium claims 1-8 and 10-12. Therefore, claims 13-20 and 22-24 are rejected based on the similar rationale.

In respect to claims 25-32 and 34-36, the claim limitations are method claims that are substantially similar to computer readable medium claims 1-8 and 10-12. Therefore, claims 25-32 and 34-36 are rejected based on the similar rationale.

4. Claims 9, 21 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blakley (U.S. Patent No. 5,862,323) in view of Barry (U.S. Patent No. 6,615,258) and further in view of Huynh et al. (U.S. Patent No. 6,240,184).

In respect to claims 9, 21 and 33, Blakley and Barry disclose the computer program product according to Claim 1, wherein the computer-readable program code means for validating further comprises:

computer-readable program code means for performing a security function on the received identifying secret of the user, wherein the security function comprises one of (i) a one-way hashing algorithm or (ii) an encryption algorithm (see col. 3, lines 9-19); computer-readable program code means for using the user identifier to locate a previously-stored identifying secret of the user which was stored by the master registry; and computer-readable program code means for comparing the located identifying

secret to a result of performing the security function (see col. 2, lines 34-45).

Blakley does not disclose but Huynh discloses means for concluding that the validation succeeds if the located identified secret is identical to a result of performing the security function (Huynh, col. 1, lines 14-54 and col. 2, lines 27-45). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching of Blakley and Barry's combine teaching of real time propagating plaintext password with the teaching of Huynh's propagating encrypted password after validating of encrypted password succeeds so that attacker who gains access to the encrypted password can not readily discern the password (Huynh, col. 1, lines 34-37).

### ***Conclusion***

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tongoc Tran whose telephone number is (571) 272-3843. The examiner can normally be reached on 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Morse can be reached on (571) 272-3838. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
